MOSAIC

CATALOG 110

The dark ceramic floor and dark wall tile at the base and up behind the lavatory are all that are needed to give this small bathroom an individual appearance.

TILE IS ECONOMICAL . . .

The first consideration in the building of a new home is to spend wisely.

You naturally want the most value for every dollar.

Construction methods may have changed somewhat in recent years, but basic designs and principles are still as sound as ever. More careful planning of certain rooms . . . baths and kitchens . . . is obvious in most residences constructed in the past few years.

Bathrooms especially, are "featured" in many new homes, and rightly so. Nothing can be pointed to with more pride than a beautifully styled bathroom of Mosaic Tiles. It speaks of quality and careful selection. When you say, "We have a Mosaic Tile bathroom in our new house," at once you win your friends' approval.

Fortunately Mosaic Tile is not an expensive material . . . and especially not, when its long lasting qualities are considered.

With Mosaic Tile, there should never need be any redecorating . . . never any repairs to walls or floors. Truly a fine building product—tile always has been since architecture began. Since the Egyptian and Roman Baths . . . tile has been the ideal material for such uses.

The Mosaic trade mark, appearing on all our products and packages, is emblematic of the highest quality in tile and other ceramic materials.

MOSAIC

Tile is a permanent material. Once properly installed it will last indefinitely. There are two approaches in vogue, in the use of tile, however. One is to consider tile as the background material for other less permanent decorative appointments. Many prefer to change color schemes occasionally—new paint, wall paper, curtains and rugs. Carefully selected tile of the proper color which works well with many different decorative schemes is the solution to the homeowner who desires a quality material.

The other approach, especially when doing period homes is to design the baths in the style of the architecture. Much comprehensive effort has been done in Colonial, Regency, Modern design and in fact all popular periods, by our designers.

Swan White . . . is a greatly improved craze resistant glaze with a pleasing texture just between the bright gloss and satin matt finishes. Its opacity and purity of color make it obviously superior to ordinary white glazes.

So many floor patterns are possible that no two need be the same. The "small home" bathroom above leaves nothing to be desired.

FLOORS THAT ARE DIFFERENT . . . The unusual floor designs featured below are but a few of the many carefully designed for discriminating clients.

By using only the standard sizes and colors of vitreous ceramic tiles almost any kind of pattern can be created to meet individual conditions and plans.

COLORS THAT WILL NEVER FADE . . .

We are all familiar with the ageless Chinese porcelain and other priceless pieces of glazed earthenware. Few of us, however, realize that better and more colorful glazes are available today. The colors shown below are but a representative selection of the many glazes produced in Mosaic tiles. These are known as Mozane Enamels and are of a bright gloss finish. Others are known as Satin Matt and possess a surface of a less glossy character. Still other glazes are applied on Faience body which is a hand made material.

THERE'S MORE TO A KITCHEN... THAN JUST A PLACE TO COOK!

Today's kitchens are more carefully planned than the living room . . . and they are used for as many different activities as space will permit.

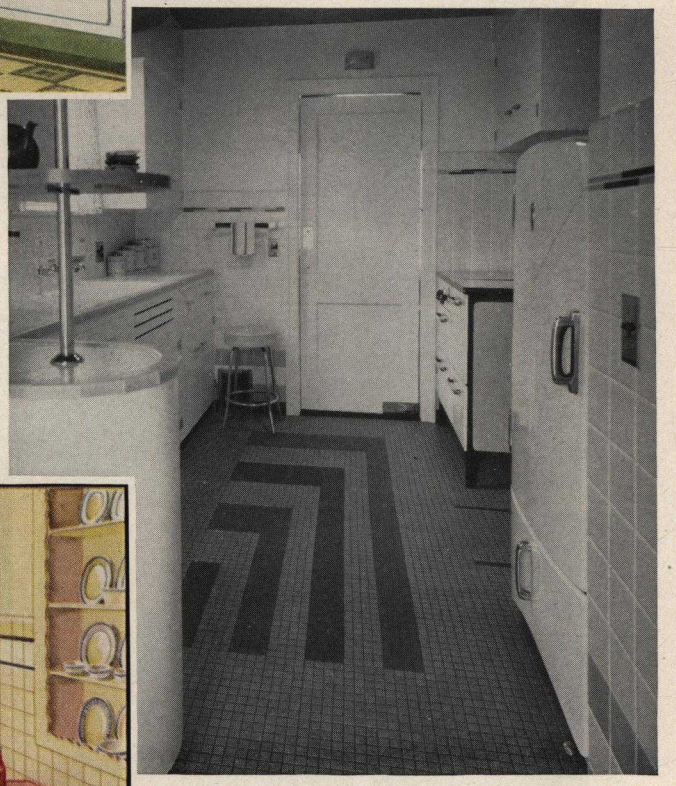
Included in many kitchens now-a-days are arrangements for serving, a desk for household business, ironing space and sometimes a laundry space, to say nothing of a spot for some hobby and last but not least . . . a space for eating.

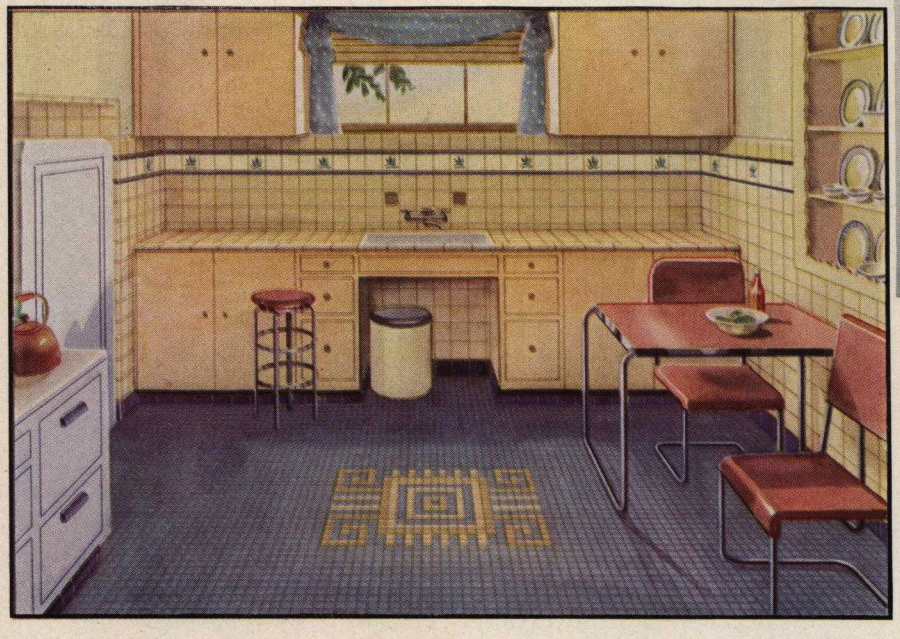
Yes! A great deal is asked of the Modern American Kitchen . . . but . . . it is "planned" today . . . and by people who know what they want.

We've learned a great deal about what people expect of their kitchens.

Color . . . colorful kitchens are the rule rather than the exception and MOSAIC TILE offers the widest range of color and the greatest permanency of any wall or floor material.

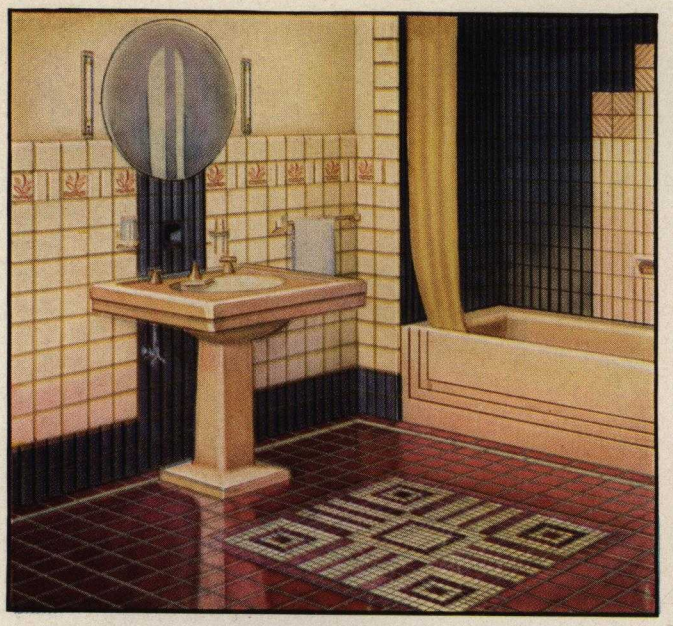
The green and buff shades of tile on the floor, walls and counter makes the above kitchen a time saver. The tiled niche for the range appeals to every woman because of the ease with which it may be kept clean. These smooth, shiny walls will always look fresh and spotless by merely wiping with a damp cloth. Color treatments in tile are innumerable because of the many combinations. It is perhaps the easiest of all material with which to work out individual decorations and color schemes.



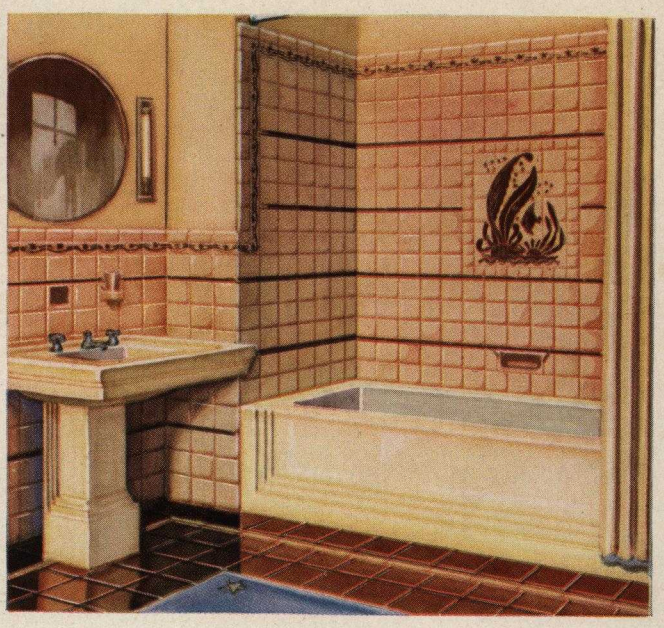


The modern influence in the above kitchen demands of tile that it emphasize the "streamlining" of the other appointments and appliances in the room. The glossy surface of Mosaic wall tile does that and more. Remember it is easier to keep clean and will last so much longer!

For those whose chief desire is color in kitchen decoration the above picture is of great interest. From the large palette of Mosaic floor and wall tiles almost any number of possible color combinations may be accomplished. Whether it be of soft pastel shades or brilliant hues of color, it can be done in individual style with Mosaic Tile.



The above modern design is typical of the exquisite bathrooms possible when Glazed Mosaic tiles are used.



A large number of decorative effects can be had for wall treatments behind tubs.

It's no secret! The first step in designing a tile bathroom is "to do" the floor. After the color and pattern of the floor has been established, the balance of the details usually are easily taken care of. Many inexpensive bathrooms keep the decoration entirely in the floor using just a few wall embellishments.

The thrill of choosing your own individual decorative motifs makes Mosaic Tile a much desired product.

REPRODUCTIONS OF RARE TILES . . . Authentic designs from the mansions of Colonial times . . . are very much in demand today. A few are shown above in Delft Blue 6"x6" tiles. These tiles are reproductions of pieces made in Holland several centuries ago. Many other patterns (in addition to those above) are available in various color decorations.

The rich colors of Carlyle Quarries harmonize beautifully with walls and wood trim in the small entrance hallway above. Long wearing and easily kept clean, these tiles are very popular for use in places where much traffic occurs.
